## PROFESSIONAL EXPERIENCE

### Core PHP Developer

**CodeLounge** August 2022 - Present Trainee period included

Backend-focused role working across legacy and product-based PHP applications connected with audit, certification, admin, document, client, lawyer, and reporting workflows.

- Maintain and extend Core PHP applications using procedural and OOP patterns while respecting existing business rules and production behavior.
- Improve form submissions, validation, status management, dynamic stock handling, file uploads, and admin-side process tracking.
- Support Watt Audit workflows including RES020 / RES022 audit flows, PDF/DOCX templates, electronic signatures, audit statuses, and multi-role operational screens.
- Contribute to Ceertif backend workflows including API behavior, JWT authentication handling, business logic maintenance, and database improvements.
- Debug and optimize MySQL reports, joins, filters, operational views, REST APIs, JSON integrations, validation, and security-sensitive flows.

## SELECTED PRODUCT WORK

### Watt Audit

Production audit and document workflow system involving admin, client, lawyer, and audit processes. Work included reporting, document generation, stock/form flows, e-signature integrations, and process statuses.

### Ceertif

Certification and digital workflow platform. Work included backend maintenance, API debugging, JWT handling, client workflow support, database changes, and production issue fixing.

## TECHNICAL SKILLS

Core PHP

OOP PHP

PDO / mysqli

MySQL

REST APIs

JSON

JWT

HTML

CSS

JavaScript

jQuery

PDF/DOCX Workflows

Admin Panels

File Uploads

Validation

Performance Debugging

## STRENGTHS

### Legacy Systems

Comfortable reading existing PHP code, tracing behavior, and making careful changes.

### Workflow Logic

Strong with status flows, documents, forms, files, and admin-side business rules.

### Production Mindset

Focused on reliability, debugging discipline, and maintainable improvements.

## EDUCATION

### PMAS Arid Agriculture University Rawalpindi

**Completed 2021 CGPA 3.19**

University education supporting my foundation in software development, databases, and analytical problem solving.

## Application for Core PHP / Backend PHP Developer Role

usman@codelounge.io

Pakistan

Dear Hiring Manager,

I am applying for a backend PHP developer role where practical production experience, strong debugging, and careful handling of existing systems are valued. Since August 2022, including my trainee period, I have worked at CodeLounge on Core PHP product systems involving MySQL databases, REST APIs, admin panels, audit workflows, document generation, authentication behavior, and production support.

My strongest work is in systems that already carry business load. I am comfortable reading legacy PHP code, understanding how the current workflow behaves, finding the exact point where a bug or data issue starts, and making a focused fix without disturbing surrounding functionality. I have worked across form submissions, status management, file uploads, PDF/DOCX templates, e-signature integrations, client and admin screens, reporting queries, and API debugging.

At CodeLounge, my work on Watt Audit and Ceertif has given me hands-on experience with real product maintenance rather than isolated practice tasks. That includes improving backend logic, tracing MySQL data problems, supporting RES020 / RES022 audit flows, handling JWT-related behavior, stabilizing JSON integrations, and applying validation and security-minded practices around user input and files.

I would bring a reliable backend mindset to your engineering team: patient debugging, respect for existing code, clear communication around issues, and the ability to make useful improvements in PHP and MySQL systems that need to keep running. I am especially interested in roles where I can support product stability while continuing to grow into deeper backend architecture and performance work.

Thank you for reviewing my application. I would welcome the opportunity to discuss how my PHP, MySQL, API, and production maintenance experience can help your team.

Sincerely,

**Muhammad Usman**
